

Determination of the amount of polymer deposited from  
(meth)acrylic acid and/or (meth)acrylic esters

## 5 Abstract

Noninvasive process for inline and/or online determination of  
polymer deposited from (meth)acrylic acid and/or (meth)acrylic  
esters by means of sound velocity measurements, measurements of  
10 the absorption coefficients in the infrared, near infrared,  
ultraviolet and/or visible region of the spectrum of  
electromagnetic radiation, or Raman spectroscopy, which allows  
precise control of the process parameters to be carried out  
during the thermal purification.
